Call for Participation for Core Programming Team 2016 – 2018 (WPISA)

Deadline: 30 Octombrie 2015

Subject: Call for participation for Core Programming Team 2016 – 2018 (WPISA)

Within the Work Package Infrastructure Support Activities (WPISA) from 2014 – 2015 the Core Programming Team (CPT) has been responsible for maintaining, documenting and implementation of new functionalities of the EUROfusion Integrated Modelling (EU IM) platform. In addition it has provided technical support and training, particularly to code developers working within the Work Package on Code Development for Integrated Modelling (WPCD).
Following the successful development of integrated modelling tools by the WPCD team and their release to EUROfusion users in 2016 the scope of the CPT is naturally extending to include the support to users of the released EU IM workflows on physics and technical issues.

With the present letter I would therefore like to invite you to propose a team from your Beneficiary to continue the current work of the CPT and provide support to new missions for the period 2016 - 2018. The proposal(s) should detail the technical skills/experience of the candidate teams and include all the information specified in Annex II of the attached document *CPT_Call_2015_final*. For budgeting salary costs, the salary level for each team member should be provided, in accordance with the 2016 declaration of salary rates by your Beneficiary (see also the attached letter ref. *1582-CM_Lt average salary costs*, issued 21st September 2015).
