

CONTENTS

FUSION PLASMA PHYSICS

- Interpretation and control of helical perturbations in tokamaks 1
- Statistical physics for anomalous transport in plasmas 7
- The anomalous transport in turbulent plasmas 13
- Simulation of the VUV spectra from the reverse field pinch 25
- Optimization of the ratio package/catalyst for the simultaneous transfer of tritium and deuterium in a water detritiation facility 29

UNDERLYING TECHNOLOGY

- Investigation of properties of optical fibers (in the UV spectral region) and optoelectronic components operating in radiation fields of fusion installations 34

TECHNOLOGY TASKS

- Development of theoretical tools and use to calculate cross sections relevant to the EAF file 44
- Gamma and proton degradation in optical transmission materials 61
- Non-destructive analysis of fusion materials samples by microtomography, micro-tomography design, fabrication and test 64

Publications in scientific journals 69

Contributions to conferences and workshops 70

Reports 72

List of mobilities to the Euratom Associations 73

Contact information 74
