

CONTENTS

<u>EXECUTIVE SUMMARY</u>	ES-1
<u>FUSION PLASMA PHYSICS</u>	
• Interpretation and control of helical perturbations in tokamaks	1
• Statistical physics for anomalous transport	11
• The anomalous transport in turbulent plasmas	26
• Simulation of the VUV spectra from the reversed field pinch EXTRAP T2R plasma. Z-EFF discrepancy analysis on the JET plasma.	40
• Tokamak neutron diagnostics based on the superheated fluid detector (SHFD)	51
• Sheath properties and related phenomena of the plasma wall interaction in magnetised plasmas. Application to ITER.	60
• Upgrade of gamma-ray cameras – neutron attenuators	73
• Participation in the exploitation of the JET facilities	
▪ Current and pressure profiles reconstruction on JET by using magnetic data and data resulting from the Motional Stark Effect (MSE) measurements as constraints	87
<u>UNDERLYING TECHNOLOGY PROGRAMME 2005</u>	
<u>Physics Integration</u>	
• Irradiation effects in ceramics for heating and current drive, and diagnostics systems	
▪ A. UV-visible spectral behaviour of sapphire optical fibres under gamma-ray and neutron radiation.	
▪ B. Investigations on the gamma-ray and electron beam radiation effects on semiconductor optical detectors for sensing and optical communication applications	90
<u>Magnet structure and integration</u>	
• Development of chemical deposition methods for the fabrication of YBCO high temperature superconducting coated conductors for high-field applications	
▪ Processing of long length CeO ₂ buffered Ni-5at.%W and Ni-5at.%W-5at.%Cr tapes for the high temperature superconducting tape fabrication.	104
<u>EFDA TECHNOLOGY WORK PROGRAMME 2005</u>	
<u>Tritium Breeding and Materials</u>	
<i>Materials Development</i>	
• NUCLEAR DATA: EFF/EAF data file upgrade, processing and benchmark analyses	
▪ Calculation of cross sections for Ta and Hf up to 50 MeV	114
• ADVANCED MATERIALS: SiC/SiC Ceramic Composites	
▪ Measurement of the electrical resistivity from RT to 1000 of unirradiated 2D and 3D SiC/SiC composites	126
<i>IFMIF, Test Facilities</i>	
▪ X-ray microtomography for HFTM capsules and rigs: (i) Influence of the sample radioactivity on the tomographic reconstruction quality and practical procedures to mitigate its effects. (ii) Experimental determination	

of resolution limits of specimens, capsules and rig assemblies	131
<i>IFMIF, Design Integration</i>	
▪ a) Deuteron-induced activated cross-section evaluation for the Fe isotopes by means of optical model potential analysis. b) Deuteron-induced activation cross-section evaluation for accelerator materials (Cu, Al, Nb and others but excluding the already studied corrosion products of the Li-target)	146
<i>TV-Vessel/ In-Vessel</i>	
• Development of a silver free induction brazing alloy	
▪ Production of nanocrystalline braze alloy by splat melting and annealing for range of appropriate compositions. The braze alloy will also be characterised.	156
<i>Fuel Cycle</i>	
• Development of ITER PRM and standard parts catalogues in CATIA V5 for tritium-containing systems and components	
▪ Development of 2-D and 3-D symbols for WDS components.	165
<u>Physics Integration</u>	
<i>Diagnostics</i>	
• Irradiation effects in ceramics for heating and current drive, and diagnostics systems	
▪ Ionizing and neutron-irradiation effects on optoelectronic components (semiconductor lasers and embedded detector).	174
▪ Report on displacement and ionising radiation effects in KU-1 and KS-4V using high-energy proton irradiation.	185
▪ In-situ thermal annealing and photobleaching of gamma and neutron irradiated aluminium jacketed silica optical fibres	191
▪ Studies on radiation induced absorption of selected alternative radiation resistant glasses following displacement damage	196
<u>2005 JET Work Programme</u>	
<i>Plasma Facing components</i>	
• Fusion Technology at JET	
▪ Assessment of detritiation with Ar plasma torch	198
<u>JET PROGRAMME IN SUPPORT OF ITER</u>	
<i>ITER-like Wall Project</i>	
• R&D on W coating on CFC and bulk W tiles development in support of the ITER-like Wall Project (BEW)	
▪ Development of W-coating technologies for CFC tiles using CMSII and TVA methods.	205
• Development of Beryllium coatings for inconel targets and Be marker tiles for the ITER-like Wall experiment project (ILW)	
▪ Manufacturing of optimized of Be/ heavy-metal/ Bulk-Be marker samples.	216
<u>Publications in scientific journals</u>	223
<u>Contributions to conferences and workshops</u>	225
<u>List of mobilities to the Euratom Associations</u>	229
<u>Contact information</u>	232
