

INSTITUTE OF ATOMIC PHYSICS

IFA

Brief Presentation

The Institute of Atomic Physics (IFA) located at Magurele was established in 1956. It spun off from the Institute of Physics of the Romanian Academy founded in 1949 under the leadership of the eminent scientist Horia Hulubei who was also the first director of IAP. The Institute of Atomic Physics laid the foundations of a Romanian scientific research elite and a renowned scientific research school: the Institute of Atomic Physics is the cradle of the Romanian physics. The development of the Platform of Physics located at Magurele reached its peak in the 1970s bringing together a human potential and a research, educational, even a social infrastructure impressive for that time. The science performed at Magurele became widely acknowledged by the international scientific community, setting a high standard for the Romanian scientific research. In 1973 IFA was incorporated, along with other research and educational institutes throughout the country, into the Central Institute of Physics (ICEFIZ) within the State Committee for Nuclear Energy (CSEN). In January 1990, as (CSEN) gone out of existence, the Institute of Atomic Physics took over the research institutes of the Central Institute of Physics and became a public institution with legal personality.

Since 1999 when the Contract of Association with EURATOM has been signed, the institute coordinates the Romanian nuclear fusion activities carried out within the European Fusion Programme that is accomplished within the Framework Programmes of the European Union. The participation in the European Fusion Programme is performed by projects that are granted on annual international competition basis. In the period 2001-2006, the institute managed the "Basic Research of Socio-

Economic Interest Programme - CERES" of the National Plan for Research-Development and Innovation and since 2005, the Module I "R&D Complex Projects" in the fields of basic and nuclear physics and socio-economics within the Research Excellence Programme (CEEX). At present the Institute of Atomic Physics is subordinated to the National Authority for Scientific Research (ANCS) - Ministry of Education, Research and Youth (MECT).

Patrimony

- Number of buildings: 1 (Tower Building)
- Total ground area: 2576,18 mp
- Building coverage: 729,11 mp

Fields of Activity

Management of the European projects of basic and applied research and technological development in the field of plasma physics and nuclear fusion, and of basic research within the national programmes.

Main Research Directions

Research projects in the basic science, socio-economics and humanistic fields of study (CERES and CEEX Programs);

Projects of basic and applied research and technological development (EURATOM Projects).

Organizational Structure

Management units: EURATOM - Fusion projects, CERES, CEEX - Module I, (socio-economics and humanistic fields of study, nuclear physics and basic sciences) Programs; functional services.

RESEARCH AND DEVELOPMENT PRODUCTS AND SERVICES

Certified Laboratories: 0

Services – Collaborations

International collaborations

There were accomplished in average 30-40 working stages per year, within the Mobility Plans approved and entirely supported by the European Commission, in the main EURATOM partner institutions: Joint European Torus (JET) - Culham, UK (9 projects), Free University Brussels, Belgium (2 projects), Nuclear Research Centre Mol, Belgium (2 projects), Research Centre for Nuclear Fusion - Cadarache, France (3 projects),

General Manager

Research Centre Karlsruhe, Germany (7 projects), Institute for Plasma Physics, Garching, Germany (2 projects), ENEA, Frascati, Italy (5 projects), KTH, Sweden (1 project), Institute for Plasma Physics, Prague, Czech Republic (1 project), CIEMAT Madrid, Spain (4 projects), Institute for Plasma Physics, the Netherlands, Belgium (1 project), etc.

National and International Programs CERES

The Institute of Atomic Physics has accomplished the management of the CERES Program within the National Plan of Research, Development and Innovation, based on the financial contract between the Institute of Atomic Physics and the Ministry of Education, Research and Youth. In the period 2001-2004, IFA organized annual competitions for project proposals and for priority projects, and concluded with the winners of the competition a number of 682 financial contracts that were carried out between 2001-2006.

During the successive execution phases of the projects the Institute of Atomic Physics performed the scientific and economic monitoring of the intermediate, annual and final reports.

CEEX

Since the year 2005 the Institute of Atomic Physics has accomplished the management of the Module I, subject areas D8, D10 and D11 within CEEX Program, through a management unit similar to that of the CERES Program. There were concluded 189 financial contracts for the period 2005-2008 with the winners of the competition organized by ANCS in 2005 and 2006 and it was performed the scientific and economic monitoring of the intermediate and final reports.

5th and 6th Framework Program of the European Union Commission

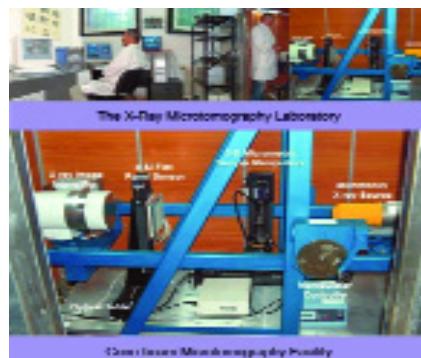

Romania participated in the 5th and 6th Framework Programs of the European Union in the field of nuclear fusion (EURATOM), since the first year in which access was granted to the acceding countries, on the basis of the Contract of Association

signed with the European Commission in 1999. The Institute of Atomic Physics, nominated in 2000 as the Research Unit for unitary coordination of the activities within the projects concluded on the basis of the Contract of Association with EURATOM, ensured this coordination through the complex project "Research, development and specialization in

the field of nuclear energy (nuclear fusion)" within the frame of Corint Program, based on the contract between the IFA and the Ministry of Education, Research and Youth. The projects approved (in average 10-15 projects per year) are implemented on the basis of the financial contracts between the Institute of Atomic Physics and the executive institutions: the National Institute for Laser, Plasma and Radiation Physics, Magurele, "Horia Hulubei" National Institute for Physics and Nuclear Engineering, Magurele, the National Institute for Cryogenics and Isotope Technologies, Râmnicu Vâlcea, the University of Craiova, the Technical University of Cluj Napoca, "Alexandru Ioan Cuza" University of Iași. According to the Contract of Association, the responsibility for the quality of project execution as well as for their completion in due time rests upon the Institute of Atomic Physics.

The main achievements of the activities performed by the Institute of Atomic Physics and the executive institutions are:

- inclusion of the nuclear fusion researches performed in Romania in the European Research Area of Nuclear Fusion;
- collaboration of the Romanian researches with the most important fusion research centers and the access at high performance fusion facilities in Europe;
- formation of highly qualified scientific researches;
- enhance the competitiveness of the Romanian scientific community in the field of nuclear fusion;

- integration of Romanian researchers into the scientific committee and subcommittee structures.

The Institute of Atomic Physics and the executive institutions are visited every year by personalities from the European Commission and from EURATOM Association partners.

At present, there are in operation two Memorandums of Understanding: one with Forschungszentrum Karlsruhe, Germany,

Research & Development activity volume (RON)			
Year	Budget financed activity	Income from other activity	Total activity
2003	109,500.00	404,154.10	513,654.10
2004	123,000.00	701,531.00	824,531.00
2005	155,917.00	809,700.00	965,617.00
2006	201,000.00	1,074,912.00	1,275,912.00
2007	241,000.00	1,139,720.00	1,380,720.00
Income resources			
From national contracts		From international contracts (Euro)	
2003	18,417,129.81	211,610.00	
2004	25,910,075.16	258,486.00

2007	93,516,875.98	290,258.00	

concluded in 2003 (renewed in 2007) and another with ENEA, Frascati, Italy, concluded in 2004.

Participation in Consortia, Networks, Technological Platforms: 0

RESULTS OF RESEARCH-DEVELOPMENT ACTIVITY

Products, Technologies, Prototypes

Within the EURATOM projects there were achieved:

Products:

- catalysts for water detritiation systems

Facilities/Apparatus

- X-ray Microtomograph for non-destructive control of materials used in fusion facilities;
- Complex equipment for the evaluation of the irradiation effects on optical and optoelectronic components;
- Complex equipment for deposition of wolfram (W) layers on carbon fiber composite (CFC) tiles at industrial scale;
- Complex equipment for deposition of beryllium (Be) markers on CFC and inconel tiles.

Technologies:

- Technology for deposition of W layers on CFC tiles, a possible technological solution for ITER fusion reactor, selected to this end for testing on the Joint European Torus (JET)
- Technology for performing the Be markers for the JET divertor wall.

Technological Transfer: 0

Patents: 0

Organization of National & International Scientific Events

- "Days of Association EURATOM /MEdC", 10-12 November 2004, Magurele Romania;
- "Days of Association EURATOM/MEdC", 27-28 October 2005, Iași, Romania;
- International Exhibition "Fusion Expo" 5-15 October, Bucharest and 19-25 October 2005, Iași, Romania;
- "Days of Association EURATOM /MECT", 10-11 October 2006, Cluj-Napoca, Romania;
- "Days of Association EURATOM/MECT", 1-3 October 2007, Râmnicu Vâlcea.

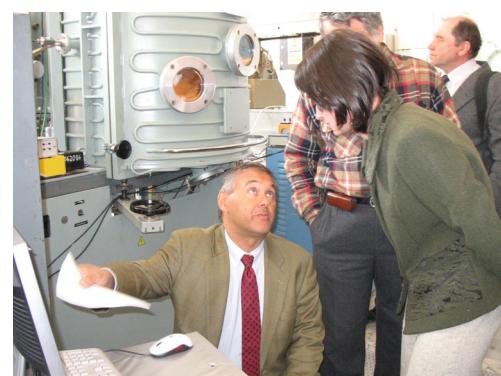

Outstanding Results Obtained at Fairs & Exhibitions: 0

Infrastructure Units for Technological Transfer: 0

National and International Affiliations: 0

Success Stories: 0
