FROM electronic transitions TO molecular activations

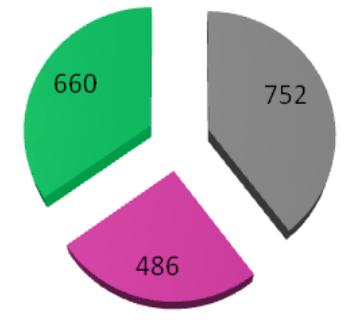

FILTERED LIGHT – Interference filters $\lambda=540 \text{ nm}$ up to 10^3 Lx

The background of the image is a wide-angle photograph of a sea or ocean. The water is a deep blue, with small, gentle ripples across its surface. Above the horizon, the sky is a lighter shade of blue, dotted with wispy, white clouds. The overall atmosphere is peaceful and expansive.

Protective Green Light Effect on cell viability under UV irradiation

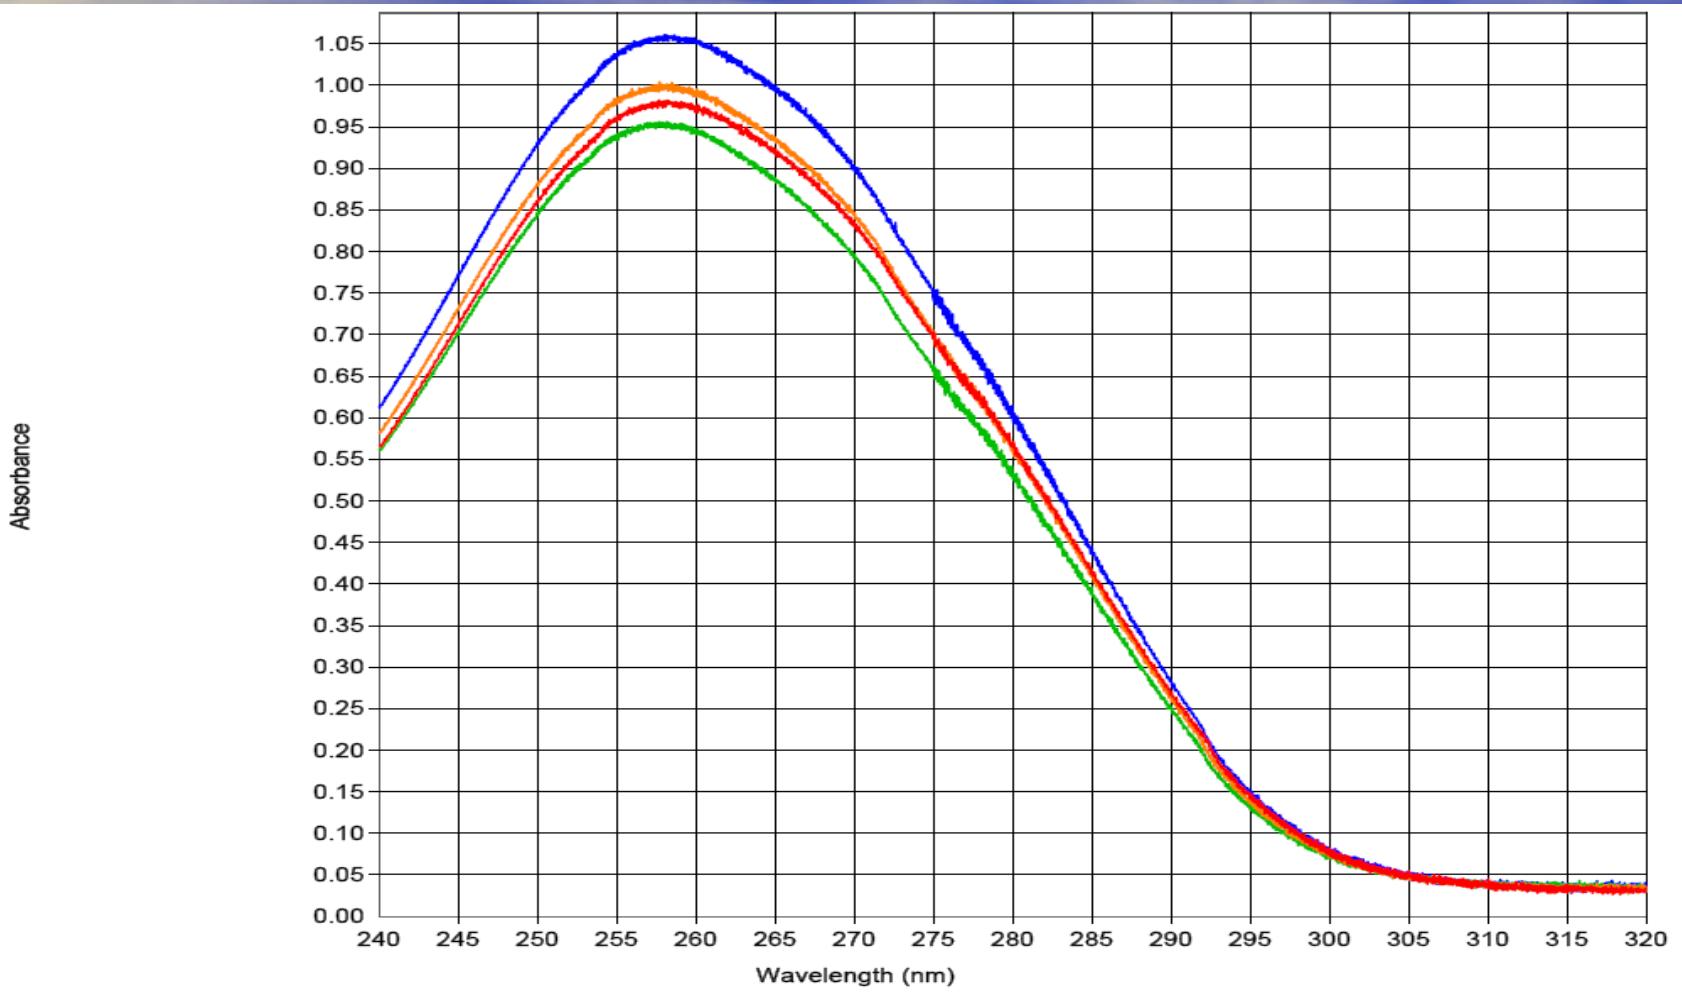

a: Experimental set-up: $22.0 \text{ J.m}^{-2}\text{sec}^{-1}$ UV-irradiation. Green light $\lambda = 546\text{nm}$ applied 24h before and 24h after UV-irradiation. Each experiment performed with five separate standardized cellular samples; viability determined by neutral red colorimetric method.

b: Experimental set-up: $11.0 \text{ J.m}^{-2}\text{sec}^{-1}$ UV-irradiation. Green light $\lambda= 546\text{nm}$ applied 24h before and 24h after UV-irradiation. Each experiment performed with five separate standardized cellular samples; viability determined by neutral red colorimetric method.

UV spectra of DNA samples UV-irradiated and of DNA samples UV irradiated and simultaneously protected by GL.

Name	Wavelength Range (nm)	Scan Speed (nm/min)	Step Size (nm)	Slit Width (nm)
1. DNA - 60 min GL.scan	319.99 - 240.00	100.00	0.04	1.50
4. DNA - 15 min UV.scan	319.99 - 240.00	100.00	0.04	1.50
2. DNA - Control.scan	319.99 - 240.00	100.00	0.04	1.50
3. DNA - 60 min GL + 15 min simultaneously UV+GL.scan	319.99 - 240.00	100.00	0.04	1.50

Impedance spectrum of a DNA probe GL-irradiated

The DNA probe, 70 µl of a 1% DNA in 0.9% NaCl is GL irradiated for 30 min., in a miniaturized irradiation cell, with an intensity of 3.10^5 Lx. Volumes of 45 µl are used in the impedance measurements.

A conjecture: anti oxidant property of GL

UV → Free Radicals + Green Light (scavenger)

Relative fluorescence yields, determined by DCFDA-probe, in culture cells irradiated with UV and protected by GL.

Results represent averages computed from the yields of reactive species generated in five different culture samples UV-irradiated, and the yields of reactive species generated in five different culture samples UV-irradiated and GL-protected.

Exp.1- $22.0 \text{ J.m}^{-2}\text{sec}^{-1}$
3 min. exposure
 $UV=0.380\pm0.04$
 $GL+UV=0.151\pm0.06$

Exp.2- $11.0 \text{ J.m}^{-2}\text{sec}^{-1}$
3 min. exposure
 $UV=0.240\pm0.03$
 $GL+UV=0.109\pm0.05$

Efectul luminii verzi asupra generarii de radicali liberi la descompunerea termica a parafinei

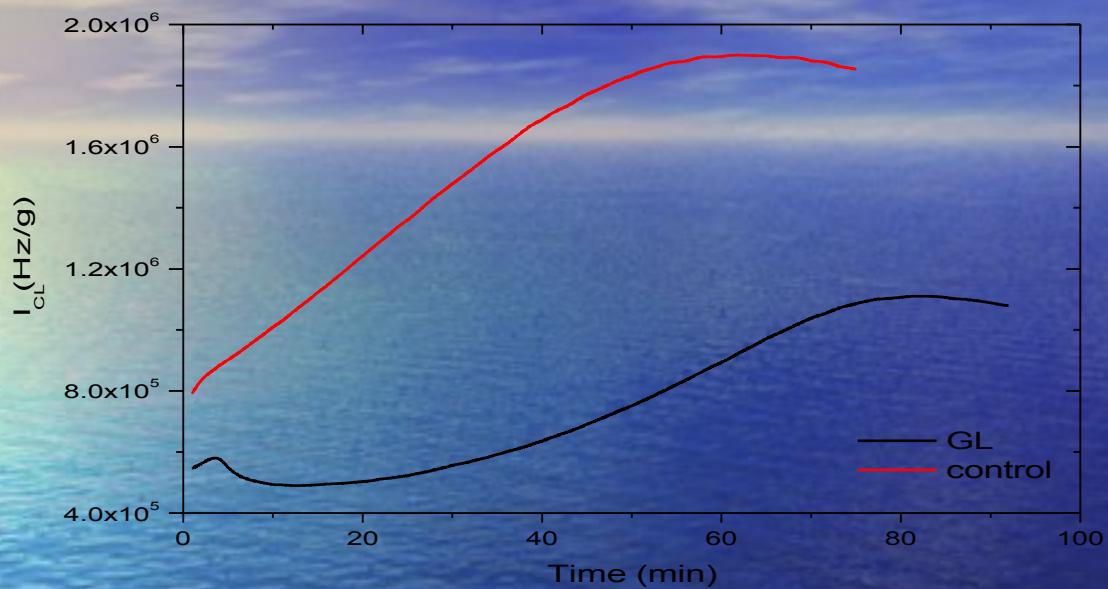

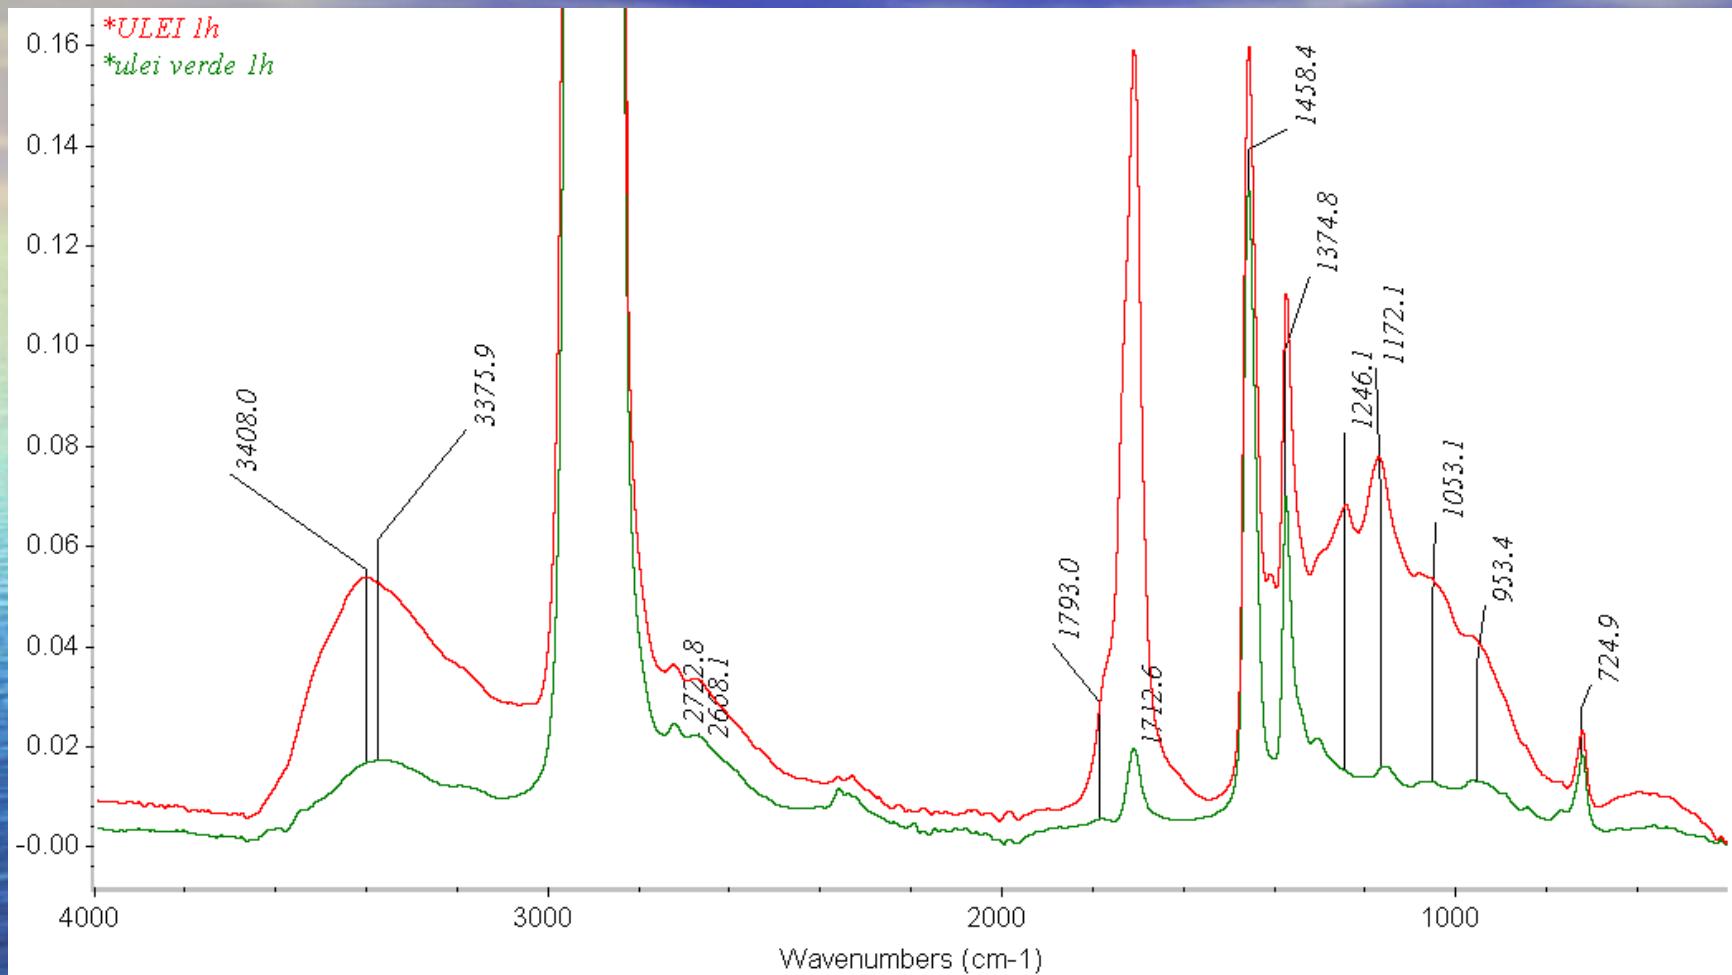

Fig. 1 – Curbele de CL izoterma ($160\text{ }^{\circ}\text{C}$, aer) pentru parafina

Nr.crt	T_{i^-} (min)	$T_{1/2}$ (min)	T_{max} (min)	I_o (Hz/g)	I_{max} (Hz/g)	V_{ox}^{max} (Hz/gmin)
Control	1	24	62	$0,79 \times 10^6$	$1,9 \times 10^6$	$0,22 \times 10^5$
Proba	32	53	83	$0,48 \times 10^6$	$1,1 \times 10^6$	$1,01 \times 10^5$

Tabelul 1 – Parametri de CL pentru parafina ($160\text{ }^{\circ}\text{C}$, aer)

ULEIUL DE PARAFINA

Spectrul IR al uleiului de parafina incalzit la 175 °C (control) si al uleiului de parafina incalzit la 175 °C sub lumina verde.

Water..water..water....everywhere

The very last thing a deep-sea fish would discover
is water.

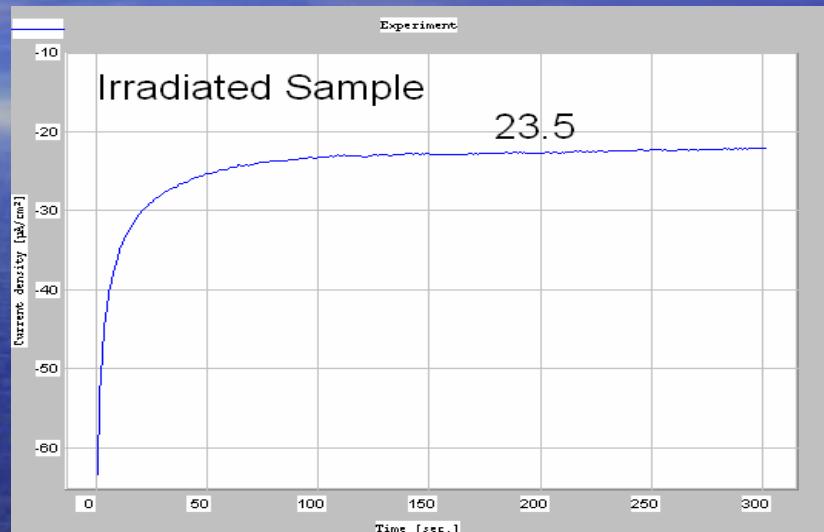

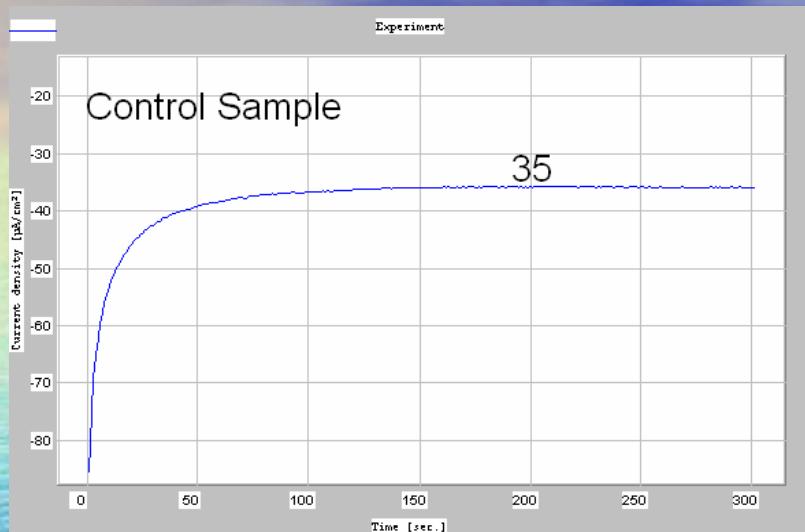

Oliver Lodge

The effect of GL-irradiations on the permeability of hypotonic NaCl solutions through erythrocytes membrane.

Irradiation times (min.)	Controls, AU _{550 nm} ± SD	GL-Irradiated, AU _{550 nm} ± SD
15	0.225 ± 0.040	0.181 ± 0.031
30	0.228 ± 0.021	0.180 ± 0.039
45	0.321 ± 0.052	0.246 ± 0.021
60	0.246 ± 0.035	0.158 ± 0.039

The results represent values of the hemoglobin leaked from the disrupted erythrocytes and checked spectrophotometrically at 550 nm. For each irradiation time experiment, numbers represent the average of 20 individual determinations.

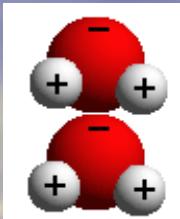

Current recording (μA) of a 0.9% NaCl solution, 60 min. GL-irradiation, as compared with the non-irradiated control.

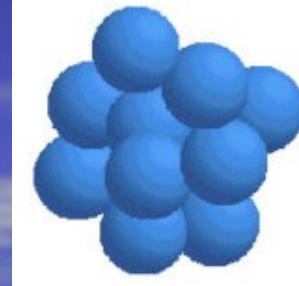

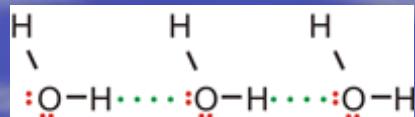

Values represented at 200 sec. of recording. Chronoamperometry at a fixed potential of 300 mV vs. Saturated Calomel Electrode.

Computed Ionic Mobility
 $+u^-)(m.S^{-1}/V).10^{-8}$
Control: 6.804 ± 1.17

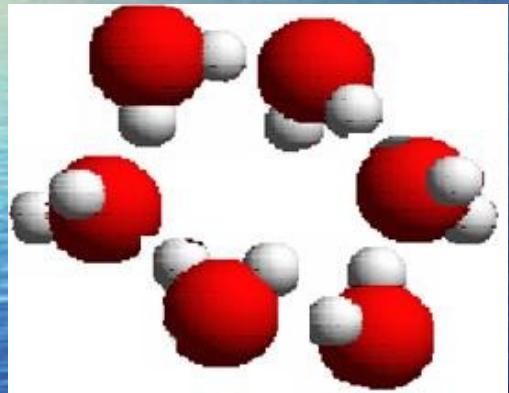

Computed Ionic Mobility (u^+)
 $(u^+ + u^-)(m.S^{-1}/V).10^{-8}$
GL-irradiated: 4.085 ± 1.20
